## Inventory Checks Simplified with Unitech Mobile Computers

### Industry

Wood Products Manufacturer/  
Custom Designed Boxes

### Application

Barcode Verifier

### Product

HT630 Mobile Computer

### Customer Profile

Weyerhaeuser, pronounced like “warehouser”, is a commercial engineer of wood products and a custom design box manufacturer. Founded in 1900 by Frederick Weyerhaeuser, the company specializes in engineered lumber and custom office storage solutions for large and small businesses. Their products are available to consumers and can be found in large retailers nationwide.

### Challenge

Receiving shipments required a Weyerhaeuser employee to manually count many boxes in a shipment. The number of boxes needed to match what was printed on the packing list. The shipments were large so this inevitably made for a lot of human error.

### Solution

Weyerhaeuser wanted to ensure each shipment was accurate and decided on upgrading to an enterprise mobile computer designed for warehousing. After researching online, they contacted Unitech directly to demo some of units.

They choose the HT630 handheld computer for its powerful scan engine and cost effectiveness. It runs on DOS and features a simple, easy-to-read display. Weighing only 8 ounces, environmentally sealed against harsh elements, and drop rated for falls of up to 4 feet, the HT630 is a rugged companion in the workplace. Setting up right out of the box is hassle-free since the HT630 is kitted with the device, power supply, stylus, cables, and 5 ready-made apps.

Since switching to a professional-grade device, managing stock has become easier and more reliable for Weyerhaeuser.
